Professional Summary

IT-oriented computer science professional with hands-on experience in technical troubleshooting, end-user support, and Python-based automation. Adept at diagnosing hardware, software, and networking issues and communicating solutions clearly to non-technical users. Brings programming depth in Python, SQL, and JavaScript to complement helpdesk and systems support work. Currently pursuing Cisco CCNA certification to strengthen networking expertise. Eager to bring technical depth and a solutions-oriented mindset to a dedicated IT team.

Experience

Software Engineer – Furniture of America E-commerce, City of Industry, CA

Oct 2022 – Apr 2024

- Provided Level 1 and Level 2 IT support for internal staff, diagnosing and resolving hardware malfunctions, networking issues, software errors, and OS/application configuration problems
- Communicated technical issues and resolutions clearly to non-technical employees, walking users through troubleshooting steps and ensuring minimal workflow disruption
- Provisioned and managed Linux-based server environments on GCP, including network configuration, SSL certificates, DNS setup, and web server optimization
- Developed and maintained automated monitoring and alerting scripts to proactively detect system issues and notify relevant departments in real time
- Built and maintained ETL pipelines and CI/CD processes to ensure reliable, accurate data flow across integrated business systems
- Documented system configurations, troubleshooting procedures, and operational workflows to support team knowledge and consistency

E-commerce & Automation Assistant – Aurora World, Pico Rivera, CA

Aug 2025 – Present

- Developed Python automation scripts to parse PDF documents and populate form data, eliminating manual entry errors and improving processing efficiency
- Maintained CMS records and coordinated with internal teams to ensure accurate information and consistent cross-departmental support
- Managed multi-channel platform operations, troubleshooting order and data discrepancies across integrated systems

Projects

Overstock FPL API — *Python, Django, MySQL, Google Cloud, Linux, Nginx, GitHub*

- Deployed and maintained a production server environment on GCP Linux VMs, managing network configuration, SSL certificates, DNS records, and web server setup end-to-end
- Designed relational SQL database schemas and backend scripts to manage and validate high-volume order and inventory data across integrated systems
- Authored system documentation including architecture overviews, API references, and standard operating procedures for ongoing team use

Finance Tracker Dashboard — *React, Vite, Firebase, Tailwind CSS, Radix UI*

- Built a full-stack interactive dashboard to parse, store, and visualize financial data with cloud persistence, demonstrating end-to-end application development skills
- Designed an intuitive, accessible UI with dynamic filters and responsive layout for ease of use across devices

Technical Skills

IT Support: Hardware troubleshooting, OS configuration (Windows/Linux), networking, device setup, end-user support

Networking: DNS, SSL/TLS, TCP/IP fundamentals, server configuration, Nginx; CCNA in progress

Programming: Python, JavaScript, SQL, HTML/CSS, C++, Go

Systems & Cloud: Linux (Ubuntu), GCP Compute Engine, Firebase, CI/CD pipelines, GitHub

Databases: MySQL, MSSQL, MongoDB, Firestore

Productivity: Microsoft Office 365, Google Workspace, Visual Studio Code, Postman

Education

B.S. in Computer Science – California State University, Fullerton

Jan 2022

Cisco CCNA Certification — In Progress
