Professional Summary

Software engineer with experience designing and deploying cloud-integrated RESTful APIs, ETL pipelines, and CI/CD systems in production environments. Proficient in Python, C++, JavaScript, and React, with hands-on experience building data management systems, automation tooling, and interactive dashboards. Eager to contribute to NASA/JPL's flight mission data infrastructure and GenAI pipeline development.

Relevant Experience

Software Engineer – Furniture of America E-commerce, City of Industry, CA

Oct 2022 – Apr 2024

- Architected a scalable RESTful API via Django REST Framework for real-time data synchronization between Warehouse Management Systems, supporting cross-team data integrity for high-volume order processing
- Engineered a cross-departmental duplicate-order prevention and alert system, reducing data integrity failures and protecting downstream WMS workflows
- Developed and maintained ETL pipelines and CI/CD processes to extract, transform, and load large datasets across integrated business applications
- Provisioned and managed production/testing environments on GCP Compute Engine (Linux VMs), including SSL certificate management, DNS configuration, and Nginx/Gunicorn optimization
- Automated scheduled monitoring scripts for departmental alerting, error handling, and real-time data oversight

E-commerce & Automation Assistant – Aurora World, Pico Rivera, CA

Aug 2025 – Present

- Developed a Python automation script to programmatically populate return data into PDF forms, reducing manual entry errors and improving processing efficiency
- Built a Python PDF parsing script to extract and sort required order line items, streamlining data retrieval and significantly improving workflow efficiency and accuracy
- Managed multi-channel marketplace operations ensuring order accuracy, platform compliance, and timely shipment processing

Projects

Overstock FPL API — *Python, Django, MySQL, Google Cloud, Gunicorn, Nginx, Linux, GitHub, Postman*

- Architected a scalable RESTful API using Django REST Framework for real-time WMS data synchronization, enabling cross-team collaboration and stable high-volume live order processing
- Provisioned GCP Compute Engine Linux VMs with full SSL, DNS, and Nginx/Gunicorn setup; directed all project phases from architecture through deployment and live operations
- Designed end-to-end data workflows including relational SQL schemas, backend processing scripts, and management portals for shipment oversight and inventory verification

Finance Tracker Dashboard — *React, Vite, Firebase (Firestore), Tailwind CSS, Radix UI*

- Built an interactive dashboard to track and visualize monthly finances, parsing Excel files and syncing aggregated data to Firestore for cloud persistence
- Designed a responsive UI with dark mode, interactive charts, and dynamic filters; leveraged Radix UI for accessibility and Vite for optimized build performance

Technical Skills

Languages: Python, C++, JavaScript, TypeScript, Go, HTML/CSS

Frontend & UI/UX: React, Radix UI, Bootstrap, jQuery, AJAX, Responsive Design

Cloud & Infra: GCP (Compute Engine), Firebase, Linux VMs, Nginx, Gunicorn, SSL/DNS

Data & APIs: RESTful APIs, Django REST Framework, ETL Pipelines, MySQL, MSSQL, MongoDB, Firestore

DevOps & Tools: GitHub, CI/CD Pipelines, Postman, Visual Studio Code, Agile methodologies, Automated Scripting

Education

B.S. in Computer Science – California State University, Fullerton

Jan 2022
